Galactose-deficient IgA1 (Gd-IgA1) ELISA

Enzyme immunoassay for the quantitative determination Galactose-deficient IgA1 antibodies in human serum or EDTA-plasma.

REF 30111694

12 x 8

For illustrative purposes only.
To perform the assay the instructions for use provided with the kit have to be used.

Gd-IgA1 (Galactose-deficient IgA1) Assay Kit-IBL

96 Well

Please read carefully this instruction prior you use this assay kit.

INSTRUCTIONS FOR USE

This product is for research use only and is not intended for diagnostic use.

KIT COMPONENT

1 Precoated plate: (Anti-Gd-IgA1/KM55) rat IgG. 96Well x 1
2 Labeled antibody conc.: (300X) HRP conjugated Anti-Human IgA Mouse HRP) 0.2mL x 1
3 Standard: (Human IgA1) 0.3ml x 2
4 EIA buffer 30ml x 1
5 Solution for labeled antibody 6ml x 1
6 Chromogen: TMB solution 15ml x 1
7 Stop solution 12ml x 1
8 Wash buffer conc. 50ml x 1

MEASURING SAMPLES

Human serum and EDTA-plasma.

PRINCIPLE

This kit is a solid phase sandwich ELISA (Enzyme-linked Immunosorbent Assay). As a primary antibody is coated on a plate, samples and standard are added into the wells for 1st reaction. After the reaction, HRP-conjugated secondary antibody is added into the wells for 2nd reaction. After washing away unbound the secondary antibody, Tetra Methyl Benzidine (TMB) is added to the wells and color develops.

OPERATING PRECAUTION

1 Test samples should be measured soon after collection. For storage of samples, store them frozen and do not repeat freeze/thaw cycles. Thaw the test samples at a low temperature and mix them completely before measurement.
2 Test samples should be diluted with "4, EIA buffer" contained in this kit.
3 Duplicate measurement of test samples and standards is recommended.
4 Standard curve should run for each assay.
5 Use test samples in neutral pH range. The contaminations of organic solvent may affect the measurement.
6 All reagents should be brought to room temperature (R.T.) and mixed completely and gently before use. After mixing them, make sure of no change in quality of the reagents.
7 Use only "8, Wash buffer conc." contained in this kit for washing the precoated plate. Insufficient washing may lead to the failure in measurement.
8 Fill the wash buffer each well, invert the plate and make sure the liquid is completely removed by shaking it off if you use a washing bottle. Repeat this washing process several times as instructed in order to avoid any insufficient washing process.
9 After remove the wash buffer, tapping the plate against a clean paper towel for completely removing the liquid from the wells and make sure the paper towel is not contact with inside of the wells in this process.
10 "6, Chromogen - TMB solution" should be stored in the dark due to its sensitivity against light. It should be also avoided contact with metals. Required quantity should be prepared into a collecting container for each use.
11 After adding TMB solution into the wells, the liquid in the wells gradually changes the color in blue. In this process the plate should be in dark. Remained TMB solution in the collecting container should not be returned into the original bottle of TMB solution to avoid contamination.
12 Measurement of O.D. should be done within 30 minutes after addition of "7, Stop solution".

OPERATION MANUAL AND DOSAGES

1. Materials needed but not supplied.
- Plate reader
- Micropipette and tip
- Test tubes for dilution
- Deionized water
- Paper towel

2. Preparation

(1) Preparation of wash buffer
Dilute "8, Wash buffer conc." 40 fold with deionized water. The diluted one is used for the assay as a wash buffer. Adjust the required quantities if needed.

(2) Preparation of labeled antibody

Dilute "2, Labeled antibody conc." 30 fold with "5, Solution for labeled antibody" using a prepared collecting container.

(3) Preparation of standard
Add 0.3 mL of deionized water into the vial of "3, Standard" and completely dissolve it. Concentration of the standard is 200 ng/mL. The standards enclosed in this kit can be frozen and stored after reconstitution. However the freeze-thaw shall be repeated. Prepare 7 test tubes for dilution of the standards and adding 120 μL of the EIA buffer into each tube.

Put 120 μL of 200 ng/mL standard into the tube 100 ng/mL (Tube-1) and gently mix it. Afterwards, put 120 μL of the mixed liquid of tube-1 into the tube 50 ng/mL (Tube-2) and gently mix it. Dilute two fold standard solution in series to set up 7 points of diluted standard between 100 ng/mL - 1.56 ng/mL.

Put 120 μL of 200 ng/mL standard into the tube 100 ng/mL (Tube-1) and gently mix it. Afterwards, put 120 μL of the mixed liquid of tube-1 into the tube 50 ng/mL (Tube-2) and gently mix it. Dilute two fold standard solution in series to set up 7 points of diluted standard between 100 ng/mL - 1.56 ng/mL.

Tube-1 100 ng/mL
Tube-2 50 ng/mL
Tube-3 25 ng/mL
Tube-4 12.50 ng/mL
Tube-5 6.25 ng/mL
Tube-6 3.13 ng/mL
Tube-7 1.56 ng/mL

(4) Preparation of test samples
Recommended dilution ratio for human serum and EDTA-plasma is 200 ~ 800 fold.

3 MEASUREMENT PROCEDURE

(1) Add test sample blank
Determine wells for test sample blank. Put 50 μL each of "4, EIA buffer" into the wells.

(2) Add prepared test samples and standard
Put 50 μL prepared test samples and 50 μL prepared standard into appropriate wells.

(3) Incubation with plate lid (1st reaction).

(4) Washing
Wash the plate with the prepared wash buffer and remove all liquid.

(5) Add prepared labeled antibody
Put 50 μL prepared labeled antibody into the wells.

(6) Incubation with plate lid (2nd reaction).

(7) Washing
Wash the plate with the prepared wash buffer and remove all liquid completely.

(8) Add "6, Chromogen - TMB solution"
Put 50 μL the TMB solution into the wells.

(9) Incubation in dark

(10) Add "7, Stop solution"
Put 50 μL the Stop solution into the wells.

(11) Determination of optical density (O.D.)
Remove any dirt or drop of water on the bottom of the plate and confirm there is no bubble on the surface of the liquid. Then, measure the both O.D. of standard and the test samples against a test sample blank.

Measurement wavelength: 450 nm. In case of 2 wavelengths:
Main wavelength is 450nm. Sub-wavelength is between 600 and 650 nm.

CALCULATION OF TEST RESULT

1 Plot the concentration of the standard on the x-axis and its O.D. on the y-axis. Draw a standard curve by applying appropriate regression curve on each plot (i.e. quadratic regression of double logarithm conversion).
2 Read the concentration by applying the absorbance of the test samples on a standard curve.
3 Calculate the concentration of the test samples by multiplying dilution ratio of test samples on the value.

PRECAUTION FOR INTENDED USE AND/OR HANDLING

1 Precaution for handling (Hazard prevention)
   (1) Treat the components carefully and wash hands after handling it.
   (2) “7, Stop solution” is a strong acid substance (1N Sulfuric acid). Therefore, it should be careful for the treatment and do not contact your skin and clothes with it. It also needs to pay attention to the disposal of it.

2 Precaution for intended use
   (1) “3, Standard” is lyophilized products. It should be careful to open this vial.
   (2) All reagents should be stored at 2 - 8°C.
   (3) Precipitation can be seen in “4, EIA buffer”, “5, Solution for labeled antibody” and “8, Wash buffer conc.”, however, it does not affect its performance.
   (4) Do not mix or replace the reagents with the reagents from a different lot or kit.
   (5) Do not use expired reagents.

3 Precaution for disposal
   (1) Dispose used materials after rinsing them with large quantity of water.

STORAGE AND THE TERM OF VALIDITY

Storage Condition: 2 - 8°C
The expiry date is specified on the outer box.

PACKAGE UNIT AND PRODUCT NUMBER

Package unit: 96 Well
Product number: 27600

**COMPLAINTS:** Complaints may be submitted initially written or vocal. Subsequently they need to be filed including the test performance and results in writing in case of analytical reasons.

**WARRANTY:** The product is warranted to be free from material defects within the specific shelf life and to comply with product specifications delivered with the product. The product must be used according to the Intended use, all instructions given in the instructions for use and within the product specific shelf life. Any modification of the test procedure or exchange or mixing of components of different lots could negatively affect the results. These cases invalidate any claim for replacement.

**LIMITATION OF LIABILITY:** In all circumstances the extent of manufacturer’s liability is limited to the purchase price of the kit(s) in question. In no event shall manufacturer be liable for any incidental or consequential damages, including damages for lost profits, lost sales, injury to person or property or any other incidental or consequential loss.
